Palm Bay, FL

Objective:

Driven aerospace engineer with an optimistic and enthusiastic mindset, looking for a position in _____

Education:

Florida Institute of Technology, Melbourne, FL

May 2027

Bachelor of Science in Aerospace Engineering, **GPA 3.89**

Skills:

Technical: Proficient with **MATLAB**, **Siemens NX**, and C++ | Experience in Material Testing and Selection for Design | Experience in IC Design | Experience in Technical report writing | Proficient with Excel, Word, PowerPoint

Project Experience:

Florida Institute of Technology, Melbourne, FL

EduSAT | LeDisco

Spring 2026 - Present

- Conducted trade studies on deployable solar array and battery technologies for a 6U CubeSat's Electrical Power System, evaluating options against power, mass, and cost requirements derived from SRR outputs.
- Developed EPS-level requirements following SRR for a 6U CubeSat with deployable solar panels and laser communication payload informing ongoing down-selection of solar cells, batteries, and power boards ahead of PDR on a 10-member senior design team.
- Collaborating with payload, structures, and communications subsystems to define EPS interface requirements and power budget constraints, progressing maturity from SRR toward PDR.

SAR Satellite Mission Proposal

Spring 2026

- Served as EPS Lead on a team proposal for a Synthetic Aperture Radar satellite, defining power requirements across mission modes and states
- Contributed EPS Analysis within a full mission architecture proposal spanning launch, space, and ground segments, mission requirement, and cost estimation.

Materials Science Project

Spring 2025

- Researched rate-dependent composite failure due to cryogenic embrittlement and proposed a ceramic matrix composite substitution to preserve mechanical properties at extreme low temperatures.
- Analyzed dynamic delamination in composites under combined shear and normal loading, identifying interlaminar separation as a primary failure mode and contributing to data-driven design recommendations.

Glider Project

Spring 2024

- **Led** the CAD design of the glider in Siemens NX as part of a 5-person team, translating precise measurements and specifications into a complete 3D model.
- Plotted real-world airfoil coordinates from an industry-standard airfoil database into CAD, learning coordinate import techniques to accurately model aerodynamic surfaces.
- Produced technical drawings of the glider in Siemens NX to document design specifications for team review and presentation.

Work Experience

Florida Institute of Technology, Melbourne, FL

Work Study – Civic Education

Fall 2024 – Present

- Works with a team of work-study students communicating with any students in need of assistance from the Student Life office while also assisting to set up events and sell tickets offered by Student Life.
-

Honors

- Tau Beta Pi Engineering Honor Society Fall 2025
 - Phi Eta Sigma National Honor Society Spring 2024 – Present
 - Dean's List (6 Semesters) Spring 2023 - Present
-

Volunteering

- Tanger Outlets Breast Cancer Awareness Events 2022-2023
- Reality Direct NY Autism Foundation, Inc. 2021-2023
